I have the idea to use. The problem is that I don't know how to find out the folders where are the archive file. A: It seems like you are looking for Assuming you are using Firefox, you would right click on the link, and select "Copy link location", then past it in the address bar of chrome. If it is not available in chrome, just do the same on any browser you use, and it should be available. If you have changed the default file name of all new downloads, then it's gone. In the File menu, select "Open folder" and it should now be open in your default downloads folder. Single-Objective Optimization of the Adaptive NanoParticles for Improved Photostability of Photodynamic Therapy. Chemical photodynamic therapy (c-PDT) is considered as a promising approach for the treatment of cancer. However, photosensitive dyes, which commonly used as photosensitizers for c-PDT, have been shown to be unstable under light irradiation, thus limiting its effective clinical translation. In this work, we have developed an adaptive nanoplatform to improve the photostability of the photosensitizers under light irradiation. In this approach, a smart amphiphilic polymer was synthesized as a template to form nanoparticles, and a trace quantity of amphiphilic photosensitizers was incorporated into the amphiphilic polymer, in which the proportion of amphiphilic photosensitizers can be changed as a function of the pH value. The nanoimmunotherapeutic agent was then formed through an instantaneous and pH-induced self-assembly process of the amphiphilic polymer and antibody. In this way, we can adjust the size of the nanoparticles and release free photosensitizers upon the disturbance of the tumor microenvironment, which can provide a single-objective optimization for the c-PDT. The in vitro and in vivo evaluations confirmed the efficiency of the developed nanoimmunotherapeutic agent against cancer cells and in vivo tumor tissues. The introduction of an adaptive nanoplatform offers a promising strategy to improve the photostability of photosensitizers in c-PDT and thus realizes c-PDT of cancer with a promising therapeutic efficacy. 469 S.W.

Experiments were conducted to study the epidemiology and pathogenesis of tumors of adrenal cortex. Out of 2000 autopsy cases, 113 adenomas, 153 pheochromocytomas and 8 adrenocortical carcinomas were observed. It was shown that the incidence of adrenal tumors in

males was greater than in females, and the age of onset was younger in males. The incidence of pheochromocytoma and malignant tumors were similar, and adenomas were the most common in the groups under 15. The surgical treatments were also reviewed, and it was pointed out that the optimal f678ea9f9e
